

ICEH Retriever Data Package

Thank you for using the ICEH Retriever.

The ICEH Retriever provides harmonized indicators on Reproductive, Maternal, Newborn, and Child Health and Nutrition (RMNCH+N) across more than 120 countries, based on hundreds of nationally representative surveys since 1991. All indicators are standardized to ensure comparability over time and across countries.

How to cite

When using this data, please cite the source as follows:

ICEH Retriever. International Center for Equity in Health (ICEH), Federal University of Pelotas, Brazil. Available at:
<https://equidade.org/en/retriever>

Updates

The ICEH Retriever is updated regularly to incorporate new surveys upon their public release. Standard updates are expected every three to four months. In addition, special updates may occur without a fixed schedule and can include the introduction of new indicators, revisions to existing indicator definitions, the addition of new stratifiers, or corrections to previously published estimates.

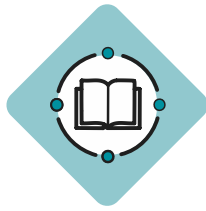

The current version of the ICEH database is indicated in the first rows of the accompanying data file (Excel or CSV) that is generated when data are downloaded through the ICEH Retriever platform.

Indicator definitions

Detailed information and definitions for each indicator are available in the accompanying spreadsheet.

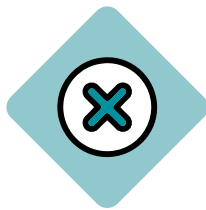

Stratifiers

Detailed information on the stratifiers is available at:
<https://equidade.org/en/stratifiers>

Additional details on which indicators are disaggregated by each stratifier are provided in the accompanying spreadsheet.

Special values

NA: Not Available
 SS: Small Sample

Estimates are not presented when the unweighted sample size is less than 25. For fertility indicators, the cut-off is 125, and for mortality indicators, the cut-off is 250.

Estimates may be missing for several reasons, including, among others, data not collected, insufficient information for calculation, and data quality issues.

Data sources

Survey sources include DHS (Demographic and Health Surveys), MICS (Multiple Indicator Cluster Surveys), and NSS (Non-Standard Surveys). NSS refers to other nationally representative surveys that are not part of DHS or MICS but follow comparable methodological standards.

Column descriptions

ISO	•	•	3-letter ISO country code
Country	•	•	Country name
Year	•	•	Starting year of data collection
Final year	•	•	Final year for multi-year surveys
Source	•	•	Survey source (DHS, MICS, or NSS)
UNICEF Region	•	•	UNICEF regional classification
Indicator Code	•	•	Unique code identifying each indicator
Indicator	•	•	Indicator name
Reference	•	•	Reference population or period (e.g. last-born in the past 5 years)
Strat	•	•	Name of the stratifier (e.g. wealth quintiles)
Level	•	•	Category within the stratifier (e.g., Q1, Q5)
Estimate	•	•	Estimated value for the indicator
Standard Error	•	•	Standard error of the estimate
Sample Size	•	•	Unweighted number of observations for the estimate

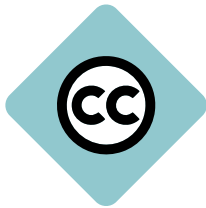

Ethical considerations

All data provided here are derived from publicly available, de-identified survey datasets.

Ethical clearance for data collection was obtained by the institutions responsible for each original survey.
